GOOGLE CLOUD × GEMINI ENTERPRISE AGENT PLATFORM

More or Less.

Architecture Brief — Snaptapp's first title

A real-time multiplayer trivia game where every generated answer is **grounded in Google Search**, calibrated by a **deterministic math kernel**, and audited before it reaches the table.

10	<2 s	0.0%	7
PLAYERS PER ROOM	GENERATED ROUND	ANSWER-LEAK GATE	METRICS BEFORE PROMOTION

THE SHORT VERSION

8 facts

- **One call per round.** Players decide whether the true figure is higher or lower than a believable decoy before the shot clock expires.
- **Grounded by default.** Custom topics call Gemini 3.5 Flash Lite with mandatory Google Search grounding; curated rounds serve from a verified fact bank.
- **Receipts, not promises.** Every generated round carries a `grounding_receipt` recording its web queries and support spans.
- **The model never picks the decoy.** DDM-4, a deterministic kernel shared by Go and TypeScript, derives every distractor number.
- **Audited before promotion.** Gemini 3.8 Flash cross-checks claims against primary sources; a 7-metric, 0.0% redline gate admits facts to Firestore.
- **Disputes get a referee.** The Fact Ombudsman runs adversarial Search checks on Cloud Run and evicts debunked facts in real time.
- **Fine-tuned on its own facts.** Audited facts export into Gemini SFT corpora and Gemma 2 9B LoRA adapters.
- **Built for rooms.** Up to 10 players sync on Durable Object WebSockets with a sub-20 ms shot clock.

MODELS
Gemini 3.5 Flash Lite · Gemini 3.8 Flash · Gemma 2 9B

GROUNDING
Google Search · mandatory on generated rounds

GUARDRAILS
DDM-4 math kernel · 7-metric gate

RUNTIME
Cloud Run (Go) · Cloud Firestore · Firebase

Inside 01 Hot path · 02 Verification · 03 The game · 04 Infrastructure

01 THE HOT PATH

Anatomy of a grounded round

From typed topic to synchronized answer in under two seconds — with a chain of custody a partner can audit. **Nothing about the number is left to the model.**

01
Scope gate
Topic text is filtered for scope and purity before any model call or quota is spent.

Keeps off-topic prompts out of the paid model path.

→ scope verdict
`pre-quota`

02
Cloud Run
`agent-go` receives an OIDC-authenticated request. No model keys live in the client.

OIDC keeps model access server-side and scoped per request.

→ OIDC request
`Google Cloud Run · OIDC`

03
Grounded generation
Gemini 3.5 Flash Lite answers with mandatory `google_search` grounding.

Search grounding is mandatory, not best-effort.

→ grounded claim
`Gemini 3.5 Flash Lite`

04
Deterministic decoy
DDM-4 derives the distractor from the verified claim across surprise factors 0–3.

The model supplies the fact; the kernel supplies the wrong number.

→ decoy number
`DDM-4 kernel`

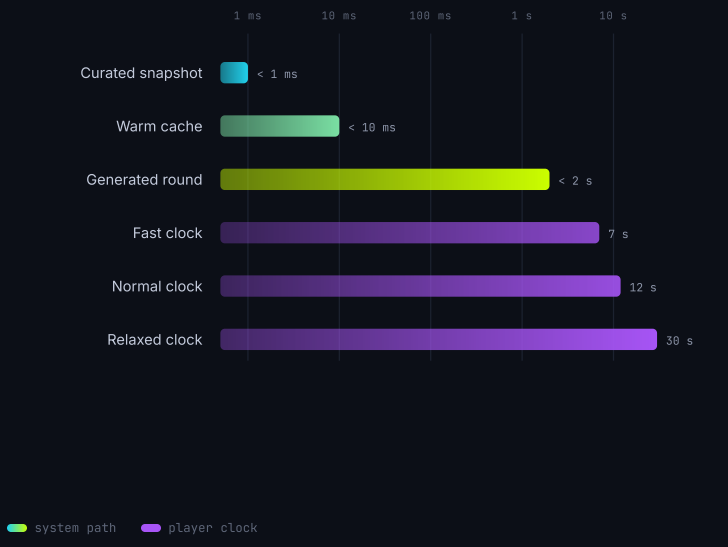

05
Stream & sync
NDJSON rounds stream to a Durable Object room; ten players share one shot clock.

The room clock, not the model, sets the deadline.

→ synchronized round
`under 2 s`

Latency ladder

LOG SCALE · DOCUMENTED BUDGETS

Inside the receipt

PER GENERATED ROUND

`grounding_receipt` telemetry

- ✓ Model and grounding tool recorded
- ✓ Every web query retained
- ✓ Support spans mapped to the claim
- ✓ Decoy hash tied to the verified number
- ✓ Emitted before the round is served

MODEL	gemini-3.5-flash-lite
TOOL	google_search
GUARD	DDM-4 · SHA-256 digest

No receipt, no round. · auditable downstream

The round the player sees

EXAMPLE · ISS ORBITAL VELOCITY

02 COLD PATH

The fact supply chain

Discovery runs offline and feeds the hot path. A claim reaches a player only after it survives verification, calibration, and the promotion gate.

01 Crawl
Gemini 3.8 Flash expands a subject into candidate numeric claims and their sources.

02 Verify
Each claim is cross-checked against primary web sources with Google Search grounding.

03 Classify
Quantity kinds are resolved so units compare correctly before any distractor exists.

04 Calibrate
DDM-4 precomputes decoy sweeps across surprise factors `0–3` for every fact.

05 Gate
Seven metrics, zero tolerance: **0.0% redline** and **0.0% answer-leak**.

06 Promote
Facts move `pending → active` in Cloud Firestore, ready for the edge snapshot.

Model allocation

GEMINI ENTERPRISE AGENT PLATFORM

WORKLOAD	3.5 FLASH LITE	3.8 FLASH	GEMMA 2 9B	GOOGLE SEARCH
Live pack generation	●	○	○	●
Fact Foundry audit	○	●	○	●

● active role · ○ not used on that workload

PROMOTION GATE

7	0.0%	0.0%
metrics in the gate	redline rate	answer-leak rate

`pending` → `active` · one bad metric keeps a fact out

CLOSED-LOOP FINE-TUNING

audited facts → adapters → back to generation

01	02	03	04
Audited facts	**Hermetic export**	**Fine-tune**	**Evaluate**
Cloud Firestore · fact_bank	agent-go export-sft	Gemini SFT · Gemma 2 9B LoRA	7 metrics · 0.0% redline · model_adapters

When a player disputes a fact

FACT OMBUDSMAN · CLOUD RUN · ADVERSARIAL SEARCH

A player report opens an adversarial review: counter-evidence queries run against primary sources, then the Ombudsman issues one of three rulings and acts on it immediately.

VERIFIED_CANONICAL
Claim upheld. The fact stays active and the dispute closes.
→ remains in rotation

DEBUNKED_AND_EVICTED
Counter-evidence wins. The fact is removed and its cache entry evicted.
→ cached rounds invalidated

AMBIGUOUS_UNIT
Units or framing can't be reconciled. The fact is quarantined for review.
→ held out of rotation

03 THE PRODUCT

Five ways to play, one verified fact bank

Same grounded round format, different pressure. Curated modes read the verified snapshot; custom topics stream live through the hot path.

Standard
CORE

Five rounds on any topic you pick, against the clock you pick.

5 rounds · 7 / 12 / 30 s

Cutthroat
ENDLESS

An endless sudden-death run drawn from the verified fact bank.

one wrong answer ends it

Daily Challenge
SHARED

The same verified rounds for everyone each UTC day.

streaks · fixed timer

Versus 1v1
DUO

The same rounds, with live round-by-round progress.

head-to-head · Firestore

Party Room
MAX 10

Up to ten players share a room and a synchronized clock.

sub-20 ms WebSocket sync

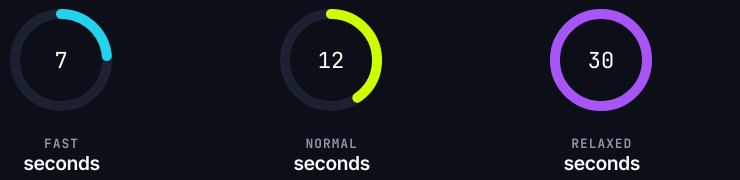

60-Second Blitz
SOON

Rapid-fire 15-question daily time attack.

DATA BOUNDARY

Canonical profiles, leaderboards, and server-authoritative match histories live in Cloud Firestore. Player answers are not used to train Snaptapp's own models.

24-month Google Cloud credit plan

FOUR PHASES · ONE STUDIO PIPELINE

MONTHS 0–6
Launch & scale
Live Gemini 3.5 Flash Lite inference and Search grounding concurrency across web, iOS, and Android launches.

MONTHS 6–12
Foundry throughput
Higher nightly crawl, audit, and dispute-arbitration volume with Gemini 3.8 Flash.

MONTHS 12–18
Continuous tuning
Gemini SFT and Gemma 2 9B evaluation jobs on a fixed cadence, behind the same 7-metric gate.

MONTHS 18–24
Studio scale
Cloud Run, Cloud Firestore, and Firebase across More or Less and Snaptapp's second title.

Reviewing the stack for a partnership or the Google for Startups Cloud Program?

The production project is more-or-less-505908. Happy to walk through any layer of the pipeline.
